VALO RESEARCH GROUP / INVESTOR INTELLIGENCE

VALO Investor

Discover what others miss.

Strategic Intelligence | Opportunity Discovery | AI Execution

An investor workspace that coordinates specialist AI research, preserves project context, and presents evidence-backed strategic options.

Designed for experienced decision-makers: direct the work in plain language, as you would lead a capable analyst team.

The proposition

Pre-need discovery: investigate opportunities before a buyer knows precisely what to search for.

Competitive intelligence: direct rivals, substitutes, market shifts, and overlooked gaps.

Strategic choices: acquire, partner, license, build, or do nothing.

How the specialist team works

One question. Four coordinated capabilities.

RESEARCH

Understand customer needs, market signals, adjacent capabilities and emerging demand.

COMPETITION

Map direct competitors, indirect alternatives, new entrants and changes in positioning.

M&A INTELLIGENCE

Investigate acquisition candidates, partnerships, strategic fit, counter-evidence and next diligence questions.

SOFTWARE FACTORY

Assess whether a new solution can be built; prototype only when a bounded build alternative is strategically useful.

ONE CONSOLIDATED RESULT

Findings, sources, assumptions, uncertainties, alternatives and recommended next steps.

Simple to use. Flexible by design.

Your experience. Your judgment. Your AI team.

ONE ENTRY POINT

An investor can ask: 'Which strategic opportunities are we overlooking across these companies?'

The intended experience spans an authenticated web workspace and approved messaging entry points. Voice/video is an interaction concept pending integration.

YOUR MODELS AND DATA

Managed, customer-selected, European-oriented or private AI deployments are design choices.

Private infrastructure and ongoing operations are separately priced and require deployment-specific verification.

IP AND CONFIDENTIALITY

Public-source research can begin without confidential portfolio documents.

Before admitting private data: verify tenant isolation, access controls, egress restrictions, model-processing terms and audit trails.

VALO RESEARCH GROUP / INVESTOR INTELLIGENCE

Start with a 30-day pilot.

Prove value before expanding scope.

THE OFFER

30 days. A cohort of 20-30 approved companies. Three to five evidence-backed strategic hypotheses.

Public sources only. No upfront payment. No confidential company documents required.

EACH HYPOTHESIS INCLUDES

Underlying need, concise competitive landscape, strategic alternatives, sources, counter-evidence, uncertainty and smallest validation step.

WHAT SUCCESS MEANS

Investors rate novelty and usefulness; humans review false positives and evidence quality.

Track analyst follow-up time, actual operating effort and willingness to pay for a continuing service.

EXPAND WHEN USEFUL

Portfolio intelligence, specialist AI capacity, Software Factory projects and dedicated private environments are optional follow-ons.
